D-ANMOL IT SOLUTIONS

AI Automation

Map repetitive tasks and prototype useful low-code automations with AI-assisted steps.

3 Months | Foundation Track

A step-by-step practical learning roadmap with explained tools, applied examples, project milestones and career preparation.

01 WHAT CAN YOU BUILD AFTER THIS COURSE?

• Lead Capture Automation: Capture a website enquiry, validate fields, save it and notify a team.

• Resume Intake & Screening Prototype: Extract candidate fields from submitted resumes and route for human review.

Possible career directions

Workflow automation trainee, operations automation specialist and low-code integration assistant. Roles are illustrative and depend on skills, experience and hiring criteria.

Your learning journey

From learning to practical delivery

Learn concepts	**Practise skills**	**Build projects**	**Show portfolio**

02 STEP-BY-STEP COURSE SYLLABUS

Modules are ordered from foundations to application. Each includes what you learn, why it matters and a practical classroom activity.

STEP 01 | Automation Fundamentals

What you will study:

• Process mapping: understand the concept, practise it with a guided example, and apply it in a relevant task.

• triggers: understand the concept, practise it with a guided example, and apply it in a relevant task.

• actions: understand the concept, practise it with a guided example, and apply it in a relevant task.

• conditions: understand the concept, practise it with a guided example, and apply it in a relevant task.

• workflow diagrams and use-case selection: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: It provides a foundation for later modules and real project implementation.

Hands-on example: Document a repetitive task and define success criteria.

STEP 02 | n8n Setup & Interface

What you will study:

• Local/cloud concepts: understand the concept, practise it with a guided example, and apply it in a relevant task.

• credentials: understand the concept, practise it with a guided example, and apply it in a relevant task.

• workflows: understand the concept, practise it with a guided example, and apply it in a relevant task.

• executions and node navigation: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: It provides a foundation for later modules and real project implementation.

Hands-on example: Create a basic trigger-to-action workflow. D-ANMOL IT SOLUTIONS | COURSE CURRICULUM Page 2

STEP 03 | Core Nodes & Data Flow

What you will study:

• Manual trigger: understand the concept, practise it with a guided example, and apply it in a relevant task.

• schedule: understand the concept, practise it with a guided example, and apply it in a relevant task.

• webhook: understand the concept, practise it with a guided example, and apply it in a relevant task.

• set/edit fields: understand the concept, practise it with a guided example, and apply it in a relevant task.

• IF: understand the concept, practise it with a guided example, and apply it in a relevant task.

• merge and loops: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: It provides a foundation for later modules and real project implementation.

Hands-on example: Build a conditional workflow with multiple branches.

STEP 04 | JSON & Data Transformation

What you will study:

• JSON structure: understand the concept, practise it with a guided example, and apply it in a relevant task.

• expressions: understand the concept, practise it with a guided example, and apply it in a relevant task.

• mapping: understand the concept, practise it with a guided example, and apply it in a relevant task.

• date/text handling and validation: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: You use this skill to solve practical problems, improve accuracy and build reliable outputs.

Hands-on example: Transform incoming form data into a clean record.

STEP 05 | Webhooks & Forms

What you will study:

• Webhook URLs: understand the concept, practise it with a guided example, and apply it in a relevant task.

• request methods: understand the concept, practise it with a guided example, and apply it in a relevant task.

• payloads: understand the concept, practise it with a guided example, and apply it in a relevant task.

• testing and secure form handling: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: You use this skill to solve practical problems, improve accuracy and build reliable outputs.

Hands-on example: Receive a form submission and process its fields.

STEP 06 | APIs & HTTP Requests

What you will study:

• REST concepts: understand the concept, practise it with a guided example, and apply it in a relevant task.

• endpoints: understand the concept, practise it with a guided example, and apply it in a relevant task.

• headers: understand the concept, practise it with a guided example, and apply it in a relevant task.

• query parameters: understand the concept, practise it with a guided example, and apply it in a relevant task.

• authentication and pagination basics: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: You use this skill to solve practical problems, improve accuracy and build reliable outputs.

Hands-on example: Connect a workflow to a sample API.

STEP 07 | Spreadsheets, Email & Notifications

What you will study:

• Google Sheets concepts: understand the concept, practise it with a guided example, and apply it in a relevant task.

• email nodes: understand the concept, practise it with a guided example, and apply it in a relevant task.

• templates: understand the concept, practise it with a guided example, and apply it in a relevant task.

• attachments and status tracking: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: You use this skill to solve practical problems, improve accuracy and build reliable outputs.

Hands-on example: Send notifications and log every submission.

STEP 08 | AI Model Integration

What you will study:

• Prompt design: understand the concept, practise it with a guided example, and apply it in a relevant task.

• structured output: understand the concept, practise it with a guided example, and apply it in a relevant task.

• model calls: understand the concept, practise it with a guided example, and apply it in a relevant task.

• token/cost awareness and output validation: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: You use this skill to solve practical problems, improve accuracy and build reliable outputs.

Hands-on example: Classify or summarise incoming text with AI.

STEP 09 | Document & Data Workflows

What you will study:

• File intake: understand the concept, practise it with a guided example, and apply it in a relevant task.

• PDF/text extraction concepts: understand the concept, practise it with a guided example, and apply it in a relevant task.

• parsing: understand the concept, practise it with a guided example, and apply it in a relevant task.

• deduplication and routing: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: You use this skill to solve practical problems, improve accuracy and build reliable outputs.

Hands-on example: Prototype a document intake workflow.

STEP 10 | Reliability & Error Handling

What you will study:

• Retries: understand the concept, practise it with a guided example, and apply it in a relevant task.

• error branches: understand the concept, practise it with a guided example, and apply it in a relevant task.

• logging: understand the concept, practise it with a guided example, and apply it in a relevant task.

• idempotency: understand the concept, practise it with a guided example, and apply it in a relevant task.

• rate limits and manual review: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: You use this skill to solve practical problems, improve accuracy and build reliable outputs.

Hands-on example: Add failure notifications and recovery steps.

03 TOOLS, LIBRARIES & THEIR USES

This section explains where each tool or library fits in a practical project. Some advanced tools may be introduced as demonstrations in shorter tracks.

Tool / library	What it is used for
n8n	Connect triggers, conditions and actions into workflows.
Webhook	Receive data when an external event occurs.
HTTP Request node	Call external REST APIs.
Google Sheets	Store records and track workflow status.
LLM integration	Classify, summarize or extract structured information.
JSON	Pass structured data between workflow nodes.

04 PROJECT-BASED LEARNING

Included: 2 project(s). Every project includes planning, implementation, testing and a presentation of results.

NORMAL PROJECT 1: Lead Capture Automation

What you will build: Capture a website enquiry, validate fields, save it and notify a team.

Where tools are used: n8n webhook, IF node, Google Sheets and email node.

Final deliverable: Working workflow with test submissions.

Project workflow

Input / brief	Build & test	Review results	Present output

Live project means an applied, end-to-end project based on a realistic business scenario or suitable dataset; access to an external client or production deployment is not implied.

LIVE PROJECT 2: Resume Intake & Screening Prototype

What you will build: Extract candidate fields from submitted resumes and route for human review.

Where tools are used: n8n file intake, PDF extraction, AI structured output, spreadsheet log.

Final deliverable: Reviewable screening workflow with error path.

Project workflow

Input / brief	Build & test	Review results	Present output

Live project means an applied, end-to-end project based on a realistic business scenario or suitable dataset; access to an external client or production deployment is not implied.

05 TRAINING PLAN & ASSESSMENTS

Suggested duration: 3 Months (approximately 12 weeks). Exact session hours and timetable should be confirmed with the institute.

- Month 1 — Foundations and tool practice
- Month 2 — Intermediate topics, assignments and normal project
- Month 3 — Live project and final review

Evaluation: practical exercises, module checkpoints, code/document review where applicable, project demonstration and final feedback.

FREE SUPPORT INCLUDED WITH EVERY COURSE

1 YEAR DOUBT SUPPORT + INTERVIEW PREPARATION — FREE OF COST

- One year of doubt-clearing support related to the enrolled course.

- Interview preparation support at no additional course fee.
- Guidance on explaining course projects and strengthening fundamental concepts.
- Availability, format and scheduling of support sessions to be communicated by the institute.

Important: This brochure presents the requested training offer. The institute should confirm the exact support policy, availability, start date and any applicable conditions before publishing. Interview preparation is not a job or placement guarantee.
