D-ANMOL IT SOLUTIONS

Data Analytics Foundations

Turn spreadsheets and business data into clear, actionable insights.

45 Days | Fast Track

A step-by-step practical learning roadmap with explained tools, applied examples, project milestones and career preparation.

01 WHAT CAN YOU BUILD AFTER THIS COURSE?

- Retail Sales Insights Report: Clean sales data and explain top products, regions and monthly patterns.
- HR Analytics Dashboard: Track attendance, headcount and attrition using sample employee data.

Possible career directions

Data analyst trainee, MIS executive, reporting analyst and junior BI analyst. Roles are illustrative and depend on skills, experience and hiring criteria.

Your learning journey

From learning to practical delivery

Learn concepts	Practise skills	Build projects	Show portfolio

02 STEP-BY-STEP COURSE SYLLABUS

Modules are ordered from foundations to application. Each includes what you learn, why it matters and a practical classroom activity.

STEP 01 | Analytics & Business Questions

What you will study:

- Data types: understand the concept, practise it with a guided example, and apply it in a relevant task.
- metrics: understand the concept, practise it with a guided example, and apply it in a relevant task.
- dimensions: understand the concept, practise it with a guided example, and apply it in a relevant task.
- KPIs: understand the concept, practise it with a guided example, and apply it in a relevant task.
- analytical thinking and data lifecycle: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: It provides a foundation for later modules and real project implementation.

Hands-on example: Convert a business brief into measurable questions.

STEP 02 | Excel Foundations

What you will study:

• Data entry: understand the concept, practise it with a guided example, and apply it in a relevant task.

• formatting: understand the concept, practise it with a guided example, and apply it in a relevant task.

• formulas: understand the concept, practise it with a guided example, and apply it in a relevant task.

• references: understand the concept, practise it with a guided example, and apply it in a relevant task.

• sorting: understand the concept, practise it with a guided example, and apply it in a relevant task.

• filtering and tables: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: It provides a foundation for later modules and real project implementation.

Hands-on example: Create a structured sales tracker. D-ANMOL IT SOLUTIONS | COURSE CURRICULUM Page 2

STEP 03 | Excel Functions & Analysis

What you will study:

• IF: understand the concept, practise it with a guided example, and apply it in a relevant task.

• SUMIF: understand the concept, practise it with a guided example, and apply it in a relevant task.

• COUNTIF: understand the concept, practise it with a guided example, and apply it in a relevant task.

• lookup functions: understand the concept, practise it with a guided example, and apply it in a relevant task.

• text/date functions and PivotTables: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: It provides a foundation for later modules and real project implementation.

Hands-on example: Analyse sales by region, category and month.

STEP 04 | Data Cleaning & Power Query

What you will study:

• Missing values: understand the concept, practise it with a guided example, and apply it in a relevant task.

• duplicates: understand the concept, practise it with a guided example, and apply it in a relevant task.

• inconsistent formats: understand the concept, practise it with a guided example, and apply it in a relevant task.

• split/merge and transformation steps: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: You use this skill to solve practical problems, improve accuracy and build reliable outputs.

Hands-on example: Clean a messy business dataset.

STEP 05 | Statistics for Analysts

What you will study:

• Mean: understand the concept, practise it with a guided example, and apply it in a relevant task.

• median: understand the concept, practise it with a guided example, and apply it in a relevant task.

• mode: understand the concept, practise it with a guided example, and apply it in a relevant task.

• spread: understand the concept, practise it with a guided example, and apply it in a relevant task.

• percent change: understand the concept, practise it with a guided example, and apply it in a relevant task.

• distributions and correlation: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: You use this skill to solve practical problems, improve accuracy and build reliable outputs.

Hands-on example: Create a descriptive statistics summary.

STEP 06 | Data Visualisation Principles

What you will study:

• Chart selection: understand the concept, practise it with a guided example, and apply it in a relevant task.

• labels: understand the concept, practise it with a guided example, and apply it in a relevant task.

• colour use: understand the concept, practise it with a guided example, and apply it in a relevant task.

• comparisons and avoiding misleading charts: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: You use this skill to solve practical problems, improve accuracy and build reliable outputs.

Hands-on example: Build a concise chart-based insight report.

03 TOOLS, LIBRARIES & THEIR USES

This section explains where each tool or library fits in a practical project. Some advanced tools may be introduced as demonstrations in shorter tracks.

Tool / library	What it is used for
Excel	Clean and summarize data using formulas and PivotTables.
SQL	Retrieve and combine data from relational tables.
Power Query	Build repeatable data cleaning steps.
Power BI	Create interactive KPI dashboards and reports.
DAX	Calculate measures such as revenue growth and ratios.

04 PROJECT-BASED LEARNING

Included: 1 project(s). Every project includes planning, implementation, testing and a presentation of results.

LIVE PROJECT 1: Retail Sales Insights Report

What you will build: Clean sales data and explain top products, regions and monthly patterns.

Where tools are used: Excel PivotTables, SQL GROUP BY, Power BI visuals.

Final deliverable: Dashboard and 1-page insight summary.

Project workflow

Input / brief	Build & test	Review results	Present output

Live project means an applied, end-to-end project based on a realistic business scenario or suitable dataset; access to an external client or production deployment is not implied.

05 TRAINING PLAN & ASSESSMENTS

Suggested duration: 45 Days (approximately 6 weeks). Exact session hours and timetable should be confirmed with the institute.

- Weeks 1–2 — Fundamentals, guided examples and practice
- Weeks 3–4 — Core modules and practical exercises
- Weeks 5–6 — Live project, testing, review and presentation

Evaluation: practical exercises, module checkpoints, code/document review where applicable, project demonstration and final feedback.

FREE SUPPORT INCLUDED WITH EVERY COURSE

1 YEAR DOUBT SUPPORT + INTERVIEW PREPARATION — FREE OF COST

- One year of doubt-clearing support related to the enrolled course.
- Interview preparation support at no additional course fee.
- Guidance on explaining course projects and strengthening fundamental concepts.
- Availability, format and scheduling of support sessions to be communicated by the institute.

Important: This brochure presents the requested training offer. The institute should confirm the exact support policy, availability, start date and any applicable conditions before publishing. Interview preparation is not a job or placement guarantee.
