D-ANMOL IT SOLUTIONS

Desktop to Dashboard: Excel, Power

BI & SQL

45 Days | Fast Track

A step-by-step practical learning roadmap with explained tools, applied examples, project milestones and career preparation.

01 WHAT CAN YOU BUILD AFTER THIS COURSE?

- Sales MIS Dashboard: Transform spreadsheet sales files into monthly KPI reporting.
- Retail BI Dashboard: Combine sales, product and customer tables into interactive reports.

Possible career directions

MIS executive, Power BI developer trainee, reporting analyst and junior BI analyst. Roles are illustrative and depend on skills, experience and hiring criteria.

Your learning journey

From learning to practical delivery

Learn concepts	**Practise skills**	**Build projects**	**Show portfolio**

02 STEP-BY-STEP COURSE SYLLABUS

Modules are ordered from foundations to application. Each includes what you learn, why it matters and a practical classroom activity.

STEP 01 | Data & Reporting Workflow

What you will study:

- Reporting lifecycle: understand the concept, practise it with a guided example, and apply it in a relevant task.
- source files: understand the concept, practise it with a guided example, and apply it in a relevant task.
- tables: understand the concept, practise it with a guided example, and apply it in a relevant task.
- data types: understand the concept, practise it with a guided example, and apply it in a relevant task.
- KPI definitions and data quality: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: It provides a foundation for later modules and real project implementation.

Hands-on example: Map a manual reporting process.

STEP 02 | Excel Foundations for MIS

What you will study:

• Tables: understand the concept, practise it with a guided example, and apply it in a relevant task.

• formatting: understand the concept, practise it with a guided example, and apply it in a relevant task.

• formulas: understand the concept, practise it with a guided example, and apply it in a relevant task.

• references: understand the concept, practise it with a guided example, and apply it in a relevant task.

• sorting: understand the concept, practise it with a guided example, and apply it in a relevant task.

• filters and data validation: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: It provides a foundation for later modules and real project implementation.

Hands-on example: Create a standardised MIS workbook. D-ANMOL IT SOLUTIONS | COURSE CURRICULUM Page 2

STEP 03 | Advanced Excel Functions

What you will study:

• IF: understand the concept, practise it with a guided example, and apply it in a relevant task.

• SUMIFS: understand the concept, practise it with a guided example, and apply it in a relevant task.

• COUNTIFS: understand the concept, practise it with a guided example, and apply it in a relevant task.

• lookup functions: understand the concept, practise it with a guided example, and apply it in a relevant task.

• text/date functions and error handling: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: It provides a foundation for later modules and real project implementation.

Hands-on example: Automate a monthly summary sheet.

STEP 04 | PivotTables & Excel Dashboards

What you will study:

• PivotTables: understand the concept, practise it with a guided example, and apply it in a relevant task.

• PivotCharts: understand the concept, practise it with a guided example, and apply it in a relevant task.

• slicers: understand the concept, practise it with a guided example, and apply it in a relevant task.

• conditional formatting and dashboard layout: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: You use this skill to solve practical problems, improve accuracy and build reliable outputs.

Hands-on example: Build an interactive Excel report.

STEP 05 | Power Query & Data Preparation

What you will study:

• Import: understand the concept, practise it with a guided example, and apply it in a relevant task.

• append: understand the concept, practise it with a guided example, and apply it in a relevant task.

• merge: understand the concept, practise it with a guided example, and apply it in a relevant task.

• transform: understand the concept, practise it with a guided example, and apply it in a relevant task.

• unpivot and refresh data: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: You use this skill to solve practical problems, improve accuracy and build reliable outputs.

Hands-on example: Combine monthly files into one clean table.

STEP 06 | SQL & Relational Concepts

What you will study:

• Tables: understand the concept, practise it with a guided example, and apply it in a relevant task.

• keys: understand the concept, practise it with a guided example, and apply it in a relevant task.

• SELECT: understand the concept, practise it with a guided example, and apply it in a relevant task.

• filtering: understand the concept, practise it with a guided example, and apply it in a relevant task.

• grouping: understand the concept, practise it with a guided example, and apply it in a relevant task.

• sorting and aggregate functions: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: You use this skill to solve practical problems, improve accuracy and build reliable outputs.

Hands-on example: Query a sales database.

03 TOOLS, LIBRARIES & THEIR USES

This section explains where each tool or library fits in a practical project. Some advanced tools may be introduced as demonstrations in shorter tracks.

Tool / library	What it is used for
Excel	Organize, calculate and review business data.
Power Query	Automate data import and transformation.
SQL	Query, join and aggregate relational data.
Power BI	Build interactive reports from multiple data sources.
DAX	Create calculated business metrics.

04 PROJECT-BASED LEARNING

Included: 1 project(s). Every project includes planning, implementation, testing and a presentation of results.

LIVE PROJECT 1: Sales MIS Dashboard

What you will build: Transform spreadsheet sales files into monthly KPI reporting.

Where tools are used: Excel Power Query, PivotTables and charts.

Final deliverable: Excel dashboard with refresh steps.

Project workflow

Input / brief	Build & test	Review results	Present output

Live project means an applied, end-to-end project based on a realistic business scenario or suitable dataset; access to an external client or production deployment is not implied.

05 TRAINING PLAN & ASSESSMENTS

Suggested duration: 45 Days (approximately 6 weeks). Exact session hours and timetable should be confirmed with the institute.

- Weeks 1–2 — Fundamentals, guided examples and practice
- Weeks 3–4 — Core modules and practical exercises
- Weeks 5–6 — Live project, testing, review and presentation

Evaluation: practical exercises, module checkpoints, code/document review where applicable, project demonstration and final feedback.

FREE SUPPORT INCLUDED WITH EVERY COURSE

1 YEAR DOUBT SUPPORT + INTERVIEW PREPARATION — FREE OF COST

- One year of doubt-clearing support related to the enrolled course.
- Interview preparation support at no additional course fee.
- Guidance on explaining course projects and strengthening fundamental concepts.
- Availability, format and scheduling of support sessions to be communicated by the institute.

Important: This brochure presents the requested training offer. The institute should confirm the exact support policy, availability, start date and any applicable conditions before publishing. Interview preparation is not a job or placement guarantee.
