D-ANMOL IT SOLUTIONS

Full Stack Web Development

Build responsive websites and full-stack applications from interface to database.

3 Months | Foundation Track

A step-by-step practical learning roadmap with explained tools, applied examples, project milestones and career preparation.

01 WHAT CAN YOU BUILD AFTER THIS COURSE?

- Responsive Business Website: Build a multi-page, mobile-friendly company website with contact form.
- Task Management Web App: Build a user interface and API to create, update and track tasks.

Possible career directions

Frontend developer trainee, junior full-stack developer and web application intern. Roles are illustrative and depend on skills, experience and hiring criteria.

Your learning journey

From learning to practical delivery

Learn concepts	**Practise skills**	**Build projects**	**Show portfolio**

02 STEP-BY-STEP COURSE SYLLABUS

Modules are ordered from foundations to application. Each includes what you learn, why it matters and a practical classroom activity.

STEP 01 | Web & Internet Foundations

What you will study:

- How websites work: understand the concept, practise it with a guided example, and apply it in a relevant task.
- browsers: understand the concept, practise it with a guided example, and apply it in a relevant task.
- servers: understand the concept, practise it with a guided example, and apply it in a relevant task.
- domains: understand the concept, practise it with a guided example, and apply it in a relevant task.
- HTTP: understand the concept, practise it with a guided example, and apply it in a relevant task.
- editor setup and developer tools: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: It provides a foundation for later modules and real project implementation.

Hands-on example: Inspect and create a simple web page.

STEP 02 | HTML5 & Semantic Structure

What you will study:

• Elements: understand the concept, practise it with a guided example, and apply it in a relevant task.

• forms: understand the concept, practise it with a guided example, and apply it in a relevant task.

• tables: understand the concept, practise it with a guided example, and apply it in a relevant task.

• media: understand the concept, practise it with a guided example, and apply it in a relevant task.

• semantic tags: understand the concept, practise it with a guided example, and apply it in a relevant task.

• accessibility and SEO basics: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: It provides a foundation for later modules and real project implementation.

Hands-on example: Build a multi-section website structure. D-ANMOL IT SOLUTIONS | COURSE CURRICULUM Page 2

STEP 03 | CSS3 & Responsive Design

What you will study:

• Selectors: understand the concept, practise it with a guided example, and apply it in a relevant task.

• box model: understand the concept, practise it with a guided example, and apply it in a relevant task.

• flexbox: understand the concept, practise it with a guided example, and apply it in a relevant task.

• grid: understand the concept, practise it with a guided example, and apply it in a relevant task.

• positioning: understand the concept, practise it with a guided example, and apply it in a relevant task.

• responsive units and media queries: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: It provides a foundation for later modules and real project implementation.

Hands-on example: Create a responsive landing page.

STEP 04 | JavaScript Fundamentals

What you will study:

• Variables: understand the concept, practise it with a guided example, and apply it in a relevant task.

• data types: understand the concept, practise it with a guided example, and apply it in a relevant task.

• operators: understand the concept, practise it with a guided example, and apply it in a relevant task.

• conditions: understand the concept, practise it with a guided example, and apply it in a relevant task.

• loops: understand the concept, practise it with a guided example, and apply it in a relevant task.

• functions and arrays/objects: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: You use this skill to solve practical problems, improve accuracy and build reliable outputs.

Hands-on example: Build interactive page behaviour.

STEP 05 | DOM, Events & Browser APIs

What you will study:

• DOM selection: understand the concept, practise it with a guided example, and apply it in a relevant task.

• events: understand the concept, practise it with a guided example, and apply it in a relevant task.

• validation: understand the concept, practise it with a guided example, and apply it in a relevant task.

• local storage and asynchronous basics: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: You use this skill to solve practical problems, improve accuracy and build reliable outputs.

Hands-on example: Create a form-driven browser application.

STEP 06 | Git, GitHub & Project Workflow

What you will study:

• Repositories: understand the concept, practise it with a guided example, and apply it in a relevant task.

• commits: understand the concept, practise it with a guided example, and apply it in a relevant task.

• branches: understand the concept, practise it with a guided example, and apply it in a relevant task.

• pull requests and collaboration basics: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: You use this skill to solve practical problems, improve accuracy and build reliable outputs.

Hands-on example: Publish and maintain a project repository.

STEP 07 | React Fundamentals

What you will study:

• Components: understand the concept, practise it with a guided example, and apply it in a relevant task.

• JSX: understand the concept, practise it with a guided example, and apply it in a relevant task.

• props: understand the concept, practise it with a guided example, and apply it in a relevant task.

• state: understand the concept, practise it with a guided example, and apply it in a relevant task.

• events: understand the concept, practise it with a guided example, and apply it in a relevant task.

• lists and conditional rendering: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: You use this skill to solve practical problems, improve accuracy and build reliable outputs.

Hands-on example: Build a reusable component-based interface.

STEP 08 | React Routing & API Integration

What you will study:

• Routing: understand the concept, practise it with a guided example, and apply it in a relevant task.

• hooks: understand the concept, practise it with a guided example, and apply it in a relevant task.

• forms: understand the concept, practise it with a guided example, and apply it in a relevant task.

• fetch: understand the concept, practise it with a guided example, and apply it in a relevant task.

• loading/error states and reusable services: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: You use this skill to solve practical problems, improve accuracy and build reliable outputs.

Hands-on example: Create a multi-page frontend consuming an API.

STEP 09 | Backend with Node.js & Express

What you will study:

• Server basics: understand the concept, practise it with a guided example, and apply it in a relevant task.

• routes: understand the concept, practise it with a guided example, and apply it in a relevant task.

• middleware: understand the concept, practise it with a guided example, and apply it in a relevant task.

• controllers: understand the concept, practise it with a guided example, and apply it in a relevant task.

• validation and REST APIs: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: You use this skill to solve practical problems, improve accuracy and build reliable outputs.

Hands-on example: Develop a REST API for a sample application.

STEP 10 | Database & Authentication

What you will study:

• SQL or MongoDB fundamentals: understand the concept, practise it with a guided example, and apply it in a relevant task.

• CRUD: understand the concept, practise it with a guided example, and apply it in a relevant task.

• relationships: understand the concept, practise it with a guided example, and apply it in a relevant task.

• password hashing and auth concepts: understand the concept, practise it with a guided example, and apply it in a relevant task.

Why this matters: You use this skill to solve practical problems, improve accuracy and build reliable outputs.

Hands-on example: Connect backend APIs to persistent data.

03 TOOLS, LIBRARIES & THEIR USES

This section explains where each tool or library fits in a practical project. Some advanced tools may be introduced as demonstrations in shorter tracks.

Tool / library	What it is used for
HTML	Define page content and semantic structure.
CSS	Control layout, responsiveness and visual styling.
JavaScript	Handle interactions and browser logic.
React	Build reusable, stateful user interfaces.
Node.js / Express	Create backend routes and REST APIs.
SQL / MongoDB	Store application records persistently.

04 PROJECT-BASED LEARNING

Included: 2 project(s). Every project includes planning, implementation, testing and a presentation of results.

NORMAL PROJECT 1: Responsive Business Website

What you will build: Build a multi-page, mobile-friendly company website with contact form.

Where tools are used: HTML semantic tags, CSS grid/flexbox and JavaScript validation.

Final deliverable: Responsive deployed site.

Project workflow

Input / brief	Build & test	Review results	Present output

Live project means an applied, end-to-end project based on a realistic business scenario or suitable dataset; access to an external client or production deployment is not implied.

LIVE PROJECT 2: Task Management Web App

What you will build: Build a user interface and API to create, update and track tasks.

Where tools are used: React components and state; Express REST endpoints; database CRUD.

Final deliverable: Full-stack app with source code.

Project workflow

Input / brief	Build & test	Review results	Present output

Live project means an applied, end-to-end project based on a realistic business scenario or suitable dataset; access to an external client or production deployment is not implied.

05 TRAINING PLAN & ASSESSMENTS

Suggested duration: 3 Months (approximately 12 weeks). Exact session hours and timetable should be confirmed with the institute.

- Month 1 — Foundations and tool practice
- Month 2 — Intermediate topics, assignments and normal project
- Month 3 — Live project and final review

Evaluation: practical exercises, module checkpoints, code/document review where applicable, project demonstration and final feedback.

FREE SUPPORT INCLUDED WITH EVERY COURSE

1 YEAR DOUBT SUPPORT + INTERVIEW PREPARATION — FREE OF COST

- One year of doubt-clearing support related to the enrolled course.
- Interview preparation support at no additional course fee.
- Guidance on explaining course projects and strengthening fundamental concepts.
- Availability, format and scheduling of support sessions to be communicated by the institute.

Important: This brochure presents the requested training offer. The institute should confirm the exact support policy, availability, start date and any applicable conditions before publishing. Interview preparation is not a job or placement guarantee.
